INTERACTIVE BIODOMES

The **Interactive BioDome** is a combination of various custom developed biofeedback technologies, based on live display of the human energy systems. The BioDome also houses devices for increasing of human energy.

The various sensors provide real-time human biophotons display and **Gas Discharge Visualization**.

The **BioDome** uses body penetrating electromagnetic radiation in various frequencies as a method of increasing human energy.

Each circuit of the **BioDome** vibrates not only on its natural frequency, but also on numerous harmonics.

METHODS OF HUMAN ENERGY INCREASE

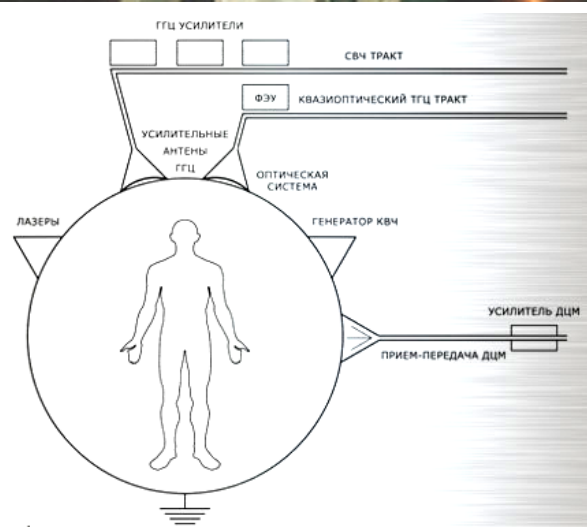

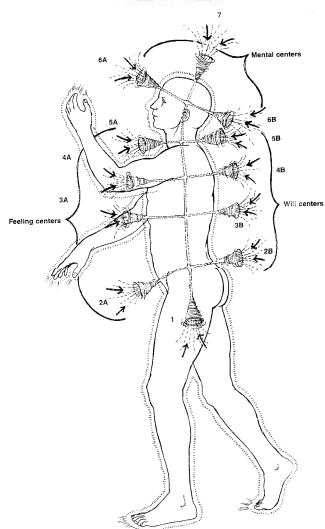

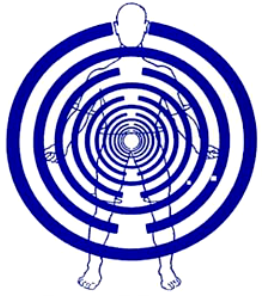

The **Abramovic Method** is Abramovic's adaptation of her Cleaning the House workshops for the general public. The method helps participants to develop skills for observing long durational performances through a series of exercises and environments designed to increase awareness of their physical and mental experience in the moment. Abramovic will install this method at MAI via a series of chambers, each dedicated to one of these exercises.
